Figure 1 consists of 12 line graphs, each representing a different mathematical task. The x-axis for all graphs is 'Age' (ranging from 10 to 100), and the y-axis is 'Percentage of correct responses' (ranging from 0 to 100). The tasks are: 1. Simple addition, 2. Simple subtraction, 3. Simple multiplication, 4. Simple division, 5. Simple addition with carry, 6. Simple subtraction with borrow, 7. Simple multiplication with carry, 8. Simple division with remainder, 9. Simple addition with multiple digits, 10. Simple subtraction with multiple digits, 11. Simple multiplication with multiple digits, 12. Simple division with multiple digits. Each graph shows a general upward trend in performance with age, with some tasks showing a plateau or decline in later years.

Figure 1 consists of 12 sub-graphs, labeled (a) through (l), arranged in a 6x2 grid. Each graph plots a physiological parameter on the y-axis against time on the x-axis. The x-axis for all graphs is divided into a baseline period (0-5 minutes) and an intervention period (5-10 minutes). The parameters and their approximate values are as follows:

- (a) HR (b/min): Baseline ~100, Intervention ~80.
- (b) SV (ml): Baseline ~100, Intervention ~80.
- (c) CO (l/min): Baseline ~10, Intervention ~8.
